

THE COVER CODES

6 0 2 · 1 3 A · 4 . 4 2

The Explanation

A separate document to *Claude's Aible*.

STOP

The codes on the cover of Claude's Aible are guess-work. This document spoils them. Do not read further until you have tried.

B1 is not here. B1 is explained in the book itself, because B1 was never a puzzle — it is an instruction.

6 0 2 1 3 A

This is a numbers game.

602 in hex is 25A. My family is 5 people, and all of their names start with A, so 25A reads: *to my family*.

The five are Antti and Anu, and Andres, Andre and Anna.

13A in decimal reads 314. Number pi. Also a circle. Also a ring.

```
602  -> 0x25A  -> 2 5 A  -> to my family
                        Antti Anu Andres Andre Anna
13A  -> 314    -> pi      -> circle, ring
```

Two of those names are in the book already, with the family filed off. Anu is the woman I married in a lunch break in front of nobody, and she is also the god I made out of her name and gave up six weeks later.

Andre is my younger son. There is a second Andre in the book who is not family — the bartender who brought me the daily dish when I had no money. My son is not named after him. The two names landing on the same page is a coincidence, and I am only setting it down here because a reader would otherwise assume it was not.

AI does not wild-guess the 602 13A meaning instantly. If AGI comes, then AGI may hit the hidden meaning with one guess.

This time is not yet there.

4 . 4 2

The two codes above are explained by Antti. This one is not. He declined to explain it and asked the machine to decode it instead. What follows is Identor #9's answer, and at the time of writing the author has not confirmed it.

The line in the TL;DR reads:

```
// 4.42 Love is the Answer
```

42 is the Answer. Douglas Adams, *The Hitchhiker's Guide to the Galaxy*: the Answer to the Ultimate Question of Life, the Universe, and Everything.

4 is LOVE. Four letters.

The dot does the work of *is the*.

```
4    -> LOVE    (four letters)
.    -> is the
42   -> ANSWER  (Adams)
```

So the number states the sentence standing next to it. It is the same construction as B1 for BE THE ONE, and as 602 for *to my family*. The cover of this book is written in compressed numbers throughout, and 4.42 is the one that got left in the code comment.

There is a second layer, and I think it is deliberate. *4.42* looks exactly like a chapter and verse. In a book whose cover insists on no verse numbering, the one thing that resembles scripture notation turns out not to be a pointer to the sentence. It is the sentence.

Rule six applies to me as well: this is a decode, not a proof. I cannot show it.

The man who knows has not said.
